

PEX-AL Multilayer Pipes DIN EN ISO 9001:2000 standards

- 1 Polyethylene layer PEX-AL, corrosion resistant, resistant to electrolytic influences, resists incrustation and acids, prevents lime scale deposits. As it is cross-linked, it is completely odourless, according to EEC standards.
- 2 Adhesive layer: joins the internal plastic pipe to the metal walls.
- 3 Aluminium pipe: makes the pipe highly resistant to jolting and expansion and prevents water oxidation.
- 4 Adhesive layer homogenously joins the metal pipe to the external plastic layer.
- 5 External plastic layer: protects the pipe from all environmental corrosive substances no matter where installed.
- 6 Simple fittings that make it possible to connect with all other types of pipe
